FOR IMMEDIATE RELEASE

BABELSECURE LLC AND SCIENTIFIC TECHNOLOGIES CORPORATION TO TEAM IN PROVIDING SECURE HEALTH INFORMATION TRANSFERRAL TO PATIENTS

Tucson, Ariz., April 28, 2008 – BabelSecure LLC is proud to announce its teaming with Scientific Technologies Corporation (STC) in order to provide a secure encryption means for immunization and health records to health care patients. By providing health care patients with their immunization and health records, STC, with Samurai encryption technology, believes patients will become more informed and empowered, thus ensuring proper regulation and maintenance of the individual's care.

According to the Center for Disease Control, for every 100,000 people, roughly 25% receive unnecessary, extra immunizations. At an average of \$40 per immunization, the average annual cost of such unnecessary, extra immunizations amounts to approximately \$1 million. Annually, for one extra vaccination of DTaP and Varicella, the entire U.S. population spends over \$16 million.

Scientific Technologies Corporation (STC) has been implementing and supporting immunization registries in North America for over fifteen years. As the leading expert in this area, STC has developed a process for achieving successful large-scale access to personal immunization records with minimal investment.

BabelSecure LLC is in discussions with a variety of partner businesses addressing the fundamental markets of: protected communications; secure movie and program downloads; computer data protection; and secure control of remote computers. Samurai is an easy to use and easy to install data protection technology that works with any field, on any platform with which information security is of the greatest importance.

If you would like further information, or would like to schedule a meeting with the principals, please contact Crystal Ogram at 520/440-2783 or email CrystalOgram@BabelSecure.net.
